

# Easy Gambling method

## Method N1 – The Average

Hi, thank you for purchasing this guide.

I apologize for any grammatical errors but unfortunately English is not my mother tongue, I will try to explain everything as simply as possible.

This method will not allow you to get rich, nor to earn 10k per day, but it will undoubtedly help you to earn from 100 to 500 € a day, without having any kind of experience.

What you need to use this method:

- A computer
  - An internet connection
  - No experience
  - A calculator (which is included in the computer, you will save € 15)
  - A brain.
- I am not responsible for the losses of this method (Gambling is gambling, the profits are many and the losses are also an option, you are taking risks.)

## Let's Start

### METHOD N1.

In this method we will talk about LIVE basketball bets, at this point you will ask yourself: How can I bet on basketball if I don't even know what shape the ball has?

Well I've never played or watched a basketball game, you won't need any experience as all you have to do is bet on UNDER and OVER for the current game, which can easily be calculated by a simple math average, with a 90% margin of success.

The sites that I use to bet are the following:

<https://www.cloudbet.com> - BTC / BCH

<https://www.bet365.com> - EUR / USD

<https://nitrogensports.eu/>

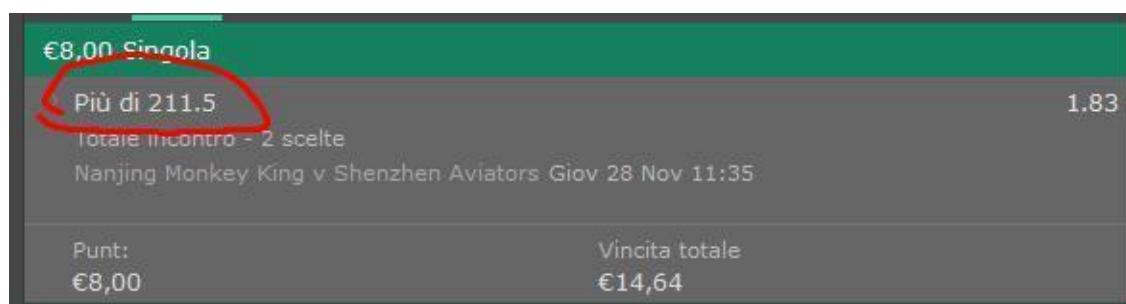

But you can use any betting site.

At the time of writing, I have two active bets that I will use to show you what to do

All you have to do is take the total to bet (in this case 211.5) and divide it by the number of sets – ( $212/4 = 53$ )

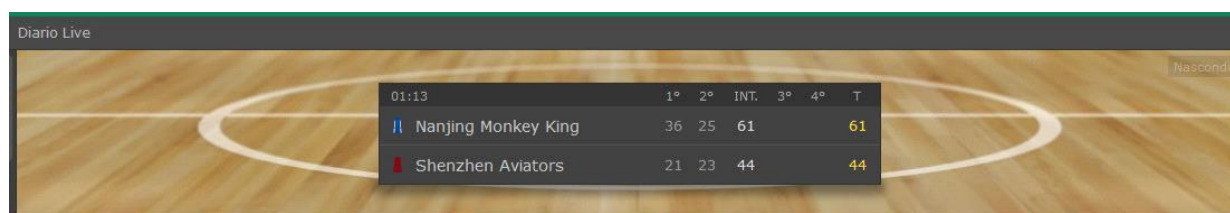

For each time the teams will have to score a total of 53 average points. For this reason the calculation will only be done after the first half (more risky but with higher odds) or the second (safer but the odds are higher)

If you wait for the teams to make mistakes, the total will be lower or higher depending on the case.

€8,00 Singola	
Più di 211.5	1.83
Totale incontro - 2 scelte	
Nanjing Monkey King v Shenzhen Aviators Giov 28 Nov 11:35	
Punt:	Vincita totale
€8,00	€14,64

We will however use OVER bets because it is easier to win them because it is easier for teams to score more and more points.

01:13	1°	2°	INT.	3°	4°	T
Nanjing Monkey King	36	25	61			61
Shenzhen Aviators	21	23	44			44

If you want to be more confident you can use sites like

<https://www.wincomparator.com/> or <https://www.sofascore.com/>

to see the scores that both teams made in previous games and to be able to optimize the averages.

If you don't know basketball (like me) at the beginning I suggest you bet little money, bankroll management is essential (it's always gambling)

After a few games you will understand how the game works and it will always be easier (as it was for me).

## METHOD N2 the PACE

Essentially we're doing live betting the **under** or **over** on total points scored (As method N1) depending on **pace**. The under is 167.5 and over is 167.5 in this picture.

END OF 2ND QUARTER		1	2	3	4	T
Ege Universitesi GSK		25	26			51
Izmir BSB		17	19			36

GAME LINES	SPREAD	TOTAL
Ege Universitesi GSK	-15.5 1.92	O 167.5 1.83
Izmir BSB	+15.5 1.82	U 167.5 1.90

The over and under will always be different on each game. So if you bet on the under and both teams combined points are 167 or under then you will win and if you bet on the over and the teams get a combined total of 167 points or more then you would win on the over.

So lets say the over/under is 160 and you bet on the under and 1 team scores 80 points and the other team scores 79 points. The total would be 159 so if you bet on the under you would get the win.

So lets define what pace is. Each team plays at a faster or slower **pace**. In the nba the shot clock has 24 seconds for you to shoot the ball. Each team that plays has a different amount of time they take to shoot the ball. Some are very fast and they will shoot in the first 10 seconds. Other teams might take 15-20 seconds to shoot. Not every single team has the same **pace**. Every team has different playstyles/plays. Just by watching a game you can tell if a team is **fast paced** or **slow paced**.

I watch a game and wait until a game is in the 3rd quarter. You don't need to watch the full game, just watch between the middle of the 3rd quarter and the 4th. Now once it starts entering the fourth quarter, what I do is start measuring the pace of the game. For example, I'm trying to see how long it takes each team to shoot the ball because each team only has 24 seconds to shoot. I'm trying to see if a team is in crisis (I can't make the ball in the basket)

I'm also trying to see if a team has grown by a lot of points. For example, if team a has increased by 40 points compared to team b, then team a will play at a slower pace and team b's confidence will be crushed and more times it will not be possible to take advantage of it because team b is having a moment of difficulty

The best thing to do is to use this technique for the main leagues and for the NBA, but if you want you can also use the technique for small local matches

During the last 5 or 6 minutes of NBA games, the pace slows down for the team that is winning because they are doing their best to make the time run out so that they shoot and score less.

This happens 6/8 times out of 10 and usually the teams will try to milk as much time as possible, which means fewer points will be scored.

So what I like to do is if the game is not too close, so I will bet on under because if a team is ahead we say 10 points, they will try to waste time.
